Watch out, here comes a pair of jaws that will rip your papers to bits and pieces! Three-inch kami is particularly at risk, but even six-inch foil has been devoured on more than one occasion.

1

Begin with a very large sheet of waterproof paper, white side up. Valley-fold in half diagonally.

2

Divide the base of the model into thirds by folding the left side in front and the right side to the back.

3

Fiddle with the folds until the thirds are exact. Then unfold the back flap.

4

Valley-fold, inserting the flap into the pocket.

5

Valley-fold on the left. Valley-fold and unfold on the right.

6

Reverse-fold.

7

Valley-fold, inserting the flap into the pocket.

8

On the front layer, make the indicated valley pinch.

9

On the front layer, make the indicated valley pinch.

10

Valley-fold one layer.

Valley fold a third of the way down.

Valley-fold.

Valley-fold a single layer. On the left and right, reverse-fold the interior layer.

Insert your hand into the pocket, bringing the model into a three-dimensional shape.

Closed-sink the left point. Mountain-fold the raw edges using curved folds.

Closed-sink the two corners.

Valley-fold the jaw flap making a curved fold. The more curved the flap, the more round the back will be.

Turn over.

Valley-fold.

Rabbit-ear the flap to taste.

Turn over.

Shark Attack! Holding at the sides as shown, push your hands together and the jaws will shut. Adjust the curved valley-fold in step 17 to optimize the jaw movement.
